

The Govplace Desktop on a Stick™

This trusted environment boots from an USB drive and allows employees to work securely from non-government-furnished (GFE) computers

Work Remotely and Securely

The Govplace Desktop on a Stick is also designed for Business Continuity scenarios. In the event of an emergency, the solution is at the ready as a trusted remote access device, or conversely, as a standalone secure environment.

The Govplace Desktop on a Stick uses the FIPS 140-2 government standard cryptographic algorithm and has been awarded a Common Criteria certificate.

Features:

- Use on any computer
- Trusted environment
- Strong authentication methods & drive encryption provide for security on the device level
- Improvised using any off-the-shelf USB flash drive
- Out-of-the Box integration with Microsoft, Citrix, VMware remote desktop connection clients & many others
- Integrate with existing administrative mediums that facilitate device deployment and repudiation

Benefits:

- Securely connect to your network resources. No changes to the native operating system needed
- Data is not retained. Each time the user boots, an identical environment is loaded
- Content is encrypted. Multiple factors of authentication are available from PIV and CAC solutions to biometrics
- Compromised devices present a non-critical failure
- Quickly integrate into your standard operating procedures
- Low operational overhead & easy for administrators to incorporate
